

said unit having a cavity disposed under said graphic image; and

a light source disposed in said cavity [and arranged to disperse light through said unit] , said light source being oriented toward said top surface and arranged to direct said light toward said top surface; said graphical image being arranged to be illuminated by said light source .

9. (Amended) A decorative device comprising:

a unit made of a flexible transparent material, said unit bearing a graphic image and having a top surface and a cavity disposed under said top surface; and

a light source disposed in said cavity and arranged to [disperse] direct light through said unit toward said top surface and arranged to emit light beams directed at said top surface to illuminate said graphic image.

[Insert the following new claims 16-19 after claim 15:]

16. A decorative device comprising:

a flat unit defined by a top and a bottom surface;

a graphic image positioned at one of a first location and a second location, said first location being on said top surface and said second location being embedded in said unit below said top surface; and

an LED embedded in said unit under said graphic image, said LED being arranged to direct light toward said graphic image.
